Dr. Greta Bauer is an Associate Professor and Graduate Chair in the Department of Epidemiology & Biostatistics in the Schulich School of Medicine & Dentistry at Western University. She came to Western in 2005, after completing her PhD at the University of Minnesota School of Public Health. Dr. Bauer’s primary research interests are in sexually transmitted infections, health care access, the broader health of sexual and gender minority communities, and in quantitative research methodology for studying communities that experience marginalization. She has served as the lead principal investigator or co-principal investigator on five research grants on the health of transgender (trans) people. Along with her community and academic colleagues, Dr. Bauer designed and implemented the first large survey of trans health conducted in Canada, as part of the Trans PULSE Project. Dr. Bauer serves as Co-Chair of the Research Committee of the Canadian Professional Association for Transgender Health. She also leads an ongoing program of research to incorporate intersectionality and multidimensionality into population health research methodology. As part of this research, she is addressing issues in survey measurement of sex/gender, sexual orientation, race/ethnicity, and discrimination.
